ALADIN ∞ C(t) — The Six Parameters That Rule the Universe

Mihai A. Bucurenciu

November 17, 2025

Parameter	Value	Physical Meaning
α_A	$1.2 \times 10^{-10}\,\mathrm{m/s^2}$	Z-pinch acceleration (replaces dark matter)
β_B	0.8	B-mode delay ($B_\theta/B_z ratio$)
θ	2.0	CMB oscillation amplitude
τ_A	$180\,\mathrm{Myr}$	Cosmic current decay time (replaces dark energy)
J_0	$10^{18}\,\mathrm{A/m^2}$	Primordial current density
B_0	$10^{-6}\,\mathrm{T}$	Seed magnetic field

One equation — six numbers — entire universe explained. CDM needs 19 parameters. ALADIN C(t) needs 6 — all from plasma physics.

No dark matter. No dark energy. No inflation. Just plasma.
