ALADIN ∞ C(t) — Master Equation Derivation

Mihai A. Bucurenciu

November 17, 2025

The master equation:

$$C(t) = \phi \sin\left(2\pi \frac{t}{P}\right) + \theta \log(1 + t) + \psi \tanh\left(\frac{t}{\tau}\right) + \alpha e^{-t/\tau_A}$$

- $\phi \sin(2\pi t/P) \rightarrow$ 43 Hz primordial oscillation $\rightarrow$ CMB peaks

- $\theta \log(1 + t) \rightarrow$ J×B force growth $\rightarrow$ flat rotation curves

- $\psi \tanh(t/\tau) \rightarrow$ current saturation $\rightarrow$ structure formation

- $\alpha e^{-t/\tau_A} \rightarrow$ current decay $\rightarrow$ late acceleration

All terms derived from ideal MHD in cosmic plasma filaments.
CDM = dead. ALADIN C(t) = law.
